

DISPLAY/OPTIC PRODUCT MODIFICATION

HMI[®] 18000W/SE GX51

July 2010

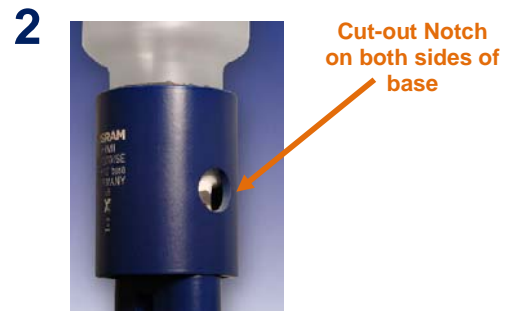

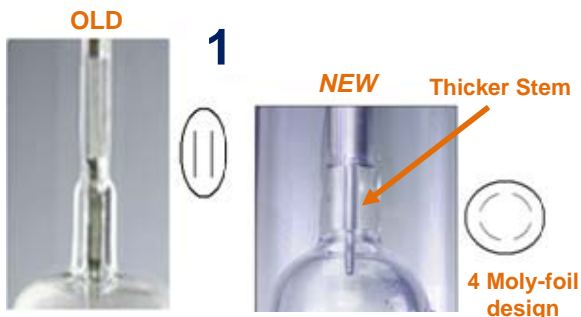

Old version:
Product No. 54289

New version:
Product No. 54324

⇒ Design Improvements:

- 1) **Thicker stems provide a more robust lamp design, resulting in less breakage during transport. The dual Moly-foil shaft has been upgraded to a highly successful, four Moly-foil design which distributes the heat more evenly. The four Moly-foil design incorporated in the new HMI 18000W/DXS and HMI 24000W/DXS lamps has created an increase of life by > 25%.**
- 2) **New base design with cut-out notches to allow greater airflow and resistance to heat in the fixture.**
- 3) **Additional outer shipping box with trampoline support to reduce shock and impact during shipping and transportation.**

Summary:

- Geometrical data and fit of the base remain unchanged.
- Technical data and lamp performance/output are similar. Product number 54324 is entirely compatible and a direct replacement to product number 54289.
